Overview of Managing POS Settings from Corporate

Managing POS Settings via corporate is a quick and simple way to make on the fly setting changes that directly affect the store's POS operations.

Settings are first pulled back from the store so you can view what is currently set. If specific changes are required, changes can be made and sent instantaneously to the store!

3. Choose the applicable store settings you wish to pull from the Get Settings From Store dropdown and choose Get

Get Settings From Store		
1 - Default Store	\sim	Get

This pulls the POS Settings that are currently running at the selected store.

If a communications error is received, it could be related to a firewall or IP address change. Contact support for assistance. 4. After retrieving the applicable store's settings, the POS Settings grid is now populated with editable fields.

Notice that the checkbox field labeled Update will
now have a check contained in it whenever a value
is updated.

When checked, this updated setting is sent to the store when you choose to **Send**.
